

## Correlation between Structural and Electronic Properties of Co-Evaporated Doped Organic Thin Films

Filesize: 7.75 MB

### ***Reviews***

*It is really an amazing pdf which i have possibly go through. Indeed, it really is play, nevertheless an amazing and interesting literature. I am just very happy to let you know that this is the best ebook i have got study in my very own life and might be he very best ebook for actually.*

## CORRELATION BETWEEN STRUCTURAL AND ELECTRONIC PROPERTIES OF CO-EVAPORATED DOPED ORGANIC THIN FILMS

[DOWNLOAD](#)

Cuvillier Verlag Okt 2014, 2014. Buch. Book Condition: Neu. 211x146x4 mm. Neuware - Devices based on organic semiconductors, like organic light emitting diodes (OLEDs) or organic solar cells, often comprise electrochemically doped charge transport layers, which improve the performance of these devices. Although very efficient devices can be realized nowadays, a comprehensive description of the physical processes taking place in electrochemically doped thin films is still missing. For instance, it was shown for a variety of different material systems that the doping efficiency, defined as the number of free charge carriers compared to the number of incorporated dopants, often amounts to only a few per cent. The organic semiconductor CBP (4,4'-Bis(N-carbazolyl)-1,1'-biphenyl), doped with the transition metal oxide molybdenum oxide (MoO<sub>3</sub>), is used here as a model system to investigate the origin for this low doping efficiency. Results from different measurement techniques, like electron tomography, EF-TEM, PES, FTIR-spectroscopy and (temperature- dependent) electrical measurements were correlated to get insight into the origin of the low doping efficiencies and to obtain a model to describe charge transport in MoO<sub>3</sub>-doped CBP films as a function of the doping concentration. 166 pp. Englisch.
